The JHU workshops meet annually, and rotate among participating universities. Kavli IPMU will be hosting the workshop for the first time this year. The purpose of each workshop is to discuss outstanding issues in particle theory, ranging from mathematical physics to cosmology.

The theme this year focuses on the intersection of particle physics with the universe across varied fronts: from observational cosmology and astronomy to new theoretical paradigms and 'swamplands', and from gigantic underground particle detectors to table-top dark matter experiments.

Dates: June 3rd - 7th, 2019

Venue: Kavli IPMU, Kashiwa, Japan

Local organizers:
Shigeki Matsumoto (Kavli IPMU)
Tom Melia (Kavli IPMU)

TAUP 2019 TOYAMA

Date: 9—13 September 2019

Place: Toyama, Japan

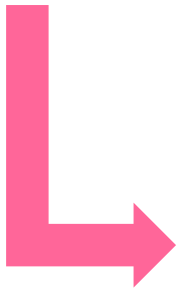

Topic: Underground Physics

OVERVIEW

The biennial TAUP series covers recent experimental and theoretical developments in astroparticle physics by invited plenary review talks and parallel workshop sessions of invited and contributed presentations. The conference is hosted by ICRR, The University of Tokyo, and supported by Kavli IPMU, The University of Tokyo and University of Toyama.
