# Status Update

07/05/2019

TUS Nao Izumi

This week…

- I modified the code so that it adds the position information to the root file.

- Benjamin and I made the poles fixing the PMT longer so that we can take FULL position measurement.
- I started taking position measurement with finer granularity.

This week… (cont.)

- The first position measurement failed because there wasn't enough space in the PC we are using, so it stopped taking data in the middle of measurement.

- We are considering saving data to an external HDD.
