TUS Nao Izumi

Status update

- Took a new fine granularity measurement last week.
→ investigating an analysis problem

Analysis problem

- $\frac{3}{4}$ of the data were analyzed okay, but the last $\frac{1}{4}$ failed.
- I checked the root file with position information and found out that the trees of last $\frac{1}{4}$ positions were empty.
- Problem in the add_position_info code?
→investigating

Analysis flow

- Midas file → root file
output_000XXX.root
- Add position information
run_XXX_positions.root
- Calculate efficiency, gain, TT, TTS, ...etc.
run_XXX_analysis.root

Digitizer problem

- We have a problem opening the digitizer.
