

## 3D rank-0 N=4 SCFTs and non-unitary TQFTs

*Monday, 31 May 2021 16:00 (1h 15m)*

I will talk about a recently proposed correspondence between 3D rank-0 N=4 SCFTs and 3D non-unitary TQFTs. Using the basic dictionaries of correspondence, we derive the lower bound on F (3-sphere free energy),  $F \geq -1/2 \log((5-\sqrt{5})/10) = 0.6429$ . The talk is based on arXiv:2103.09283.
