

変革を駆動する先端物理・数学プログラム

# Forefront Physics and Mathematics Program to Drive Transformation

Hitoshi Murayama, Coordinator

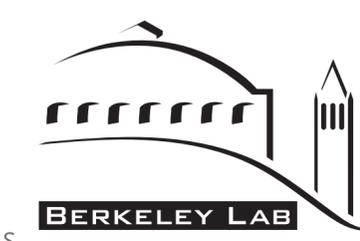

(Berkeley, Kavli Institute for the Physics and Mathematics of the Universe)

東京大学  
THE UNIVERSITY OF TOKYO

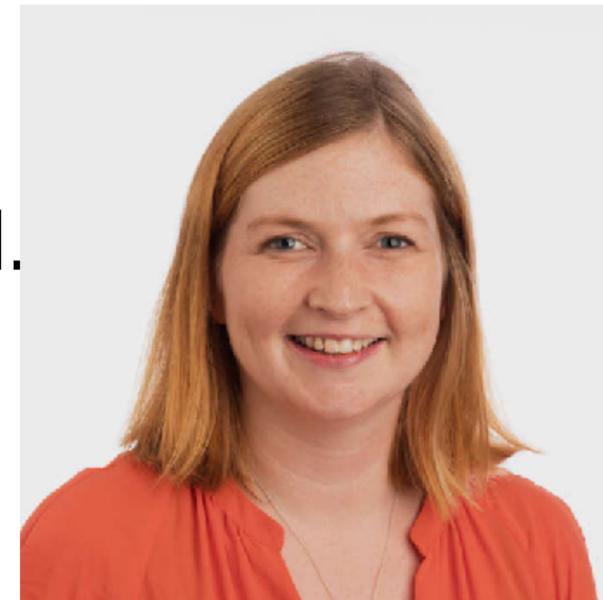

INSTITUTE FOR THE PHYSICS AND  
MATHEMATICS OF THE UNIVERSE

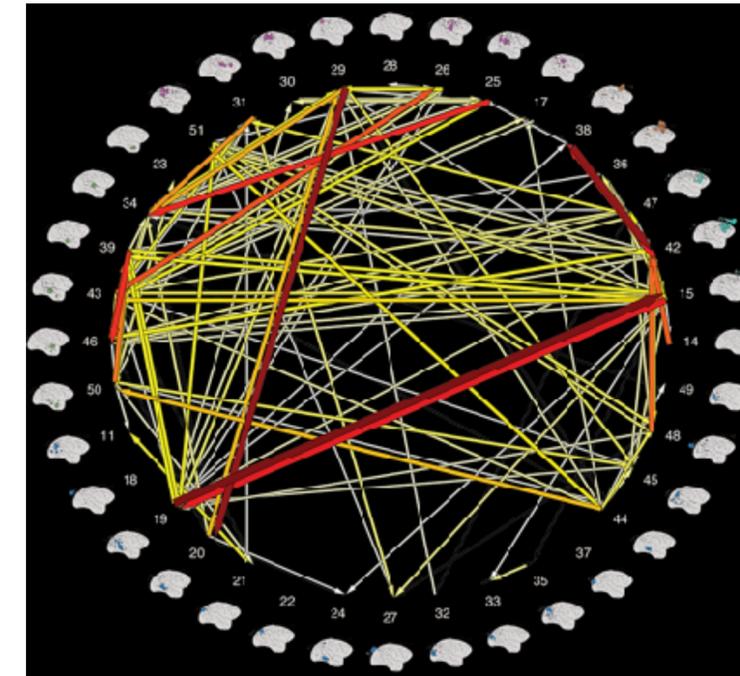

# Congratulations!

- You attended and made a presentation at an international conference.
- You can list it in your CV, JSPS application, postdoc application etc
- Many of you made a big effort to reach out to students in other fields. *I was impressed.*
- Given a talk is a *skill*. You work on learn the skill.
- Remember the talk by Heather Doran.
- Please watch my video on effective presentations if you haven't.

# Networking

- Many of you asked questions and interacted with invited speakers as well as other students. *I was impressed.*
- Networking is important to be successful in your career
  - Not just academic career
  - Also important in the industry, public service (and brain)
- Conference is a lot more about networking than science presentations.
  - If not, why do you bother to travel to attend a conference?
  - Humans are still analog. Zoom is not a substitute to in-person meetings.

# Be confident

英語

- If you don't understand talks from other fields, or even in your field, you should not be discouraged. *It is perfectly normal.*
  - Just having learned a few words, a few concepts, a few people can help you a lot later on
- Speaking and listening to English is something *you get used to*. You never become perfect. I know most Americans speak broken English ;-)  
Don't worry about not being perfect. It is not an entrance exam (受験), just a tool.
- Speak with enthusiasm and passion. It is contagious.
- We work together because nobody is complete. Know your strengths. Use them. Help others.

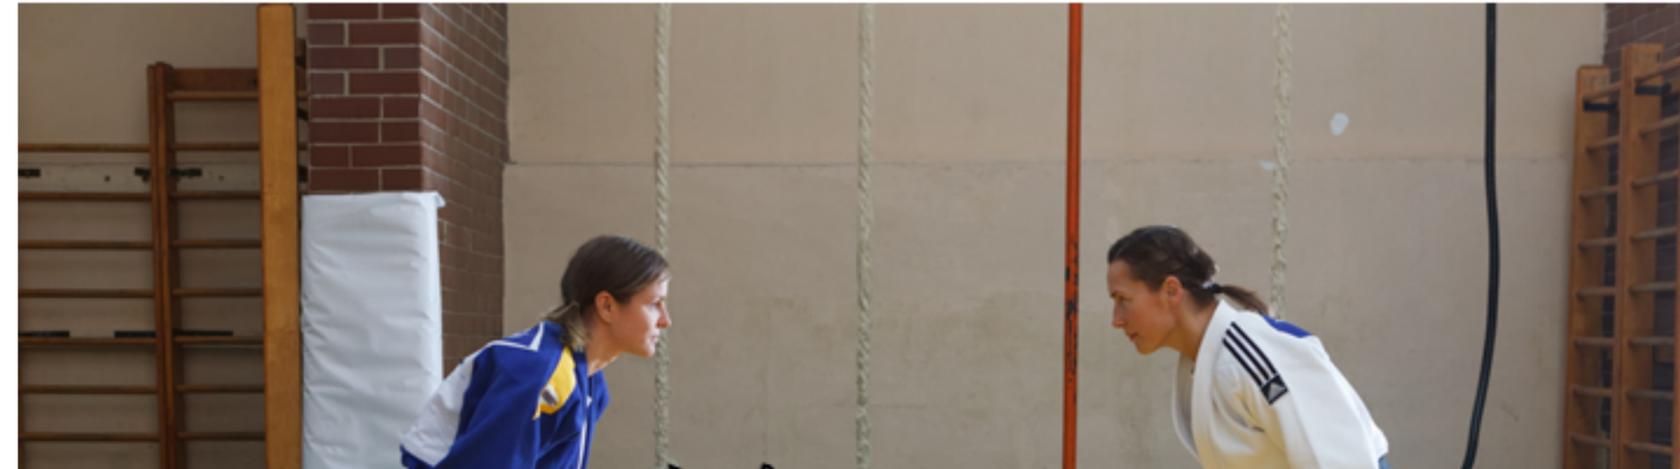

A) 次の英文の要旨を70~80字の日本語にまとめよ。句読点も字数に含める。

Rumours spread by two different but overlapping processes: popular confirmation and in-group momentum. The first occurs because each of us tends to rely on what others think and do. Once a certain number of people appear to believe a rumour, others will believe it too, unless they have good reasons to doubt it. Most rumours involve topics on which people often simply trust

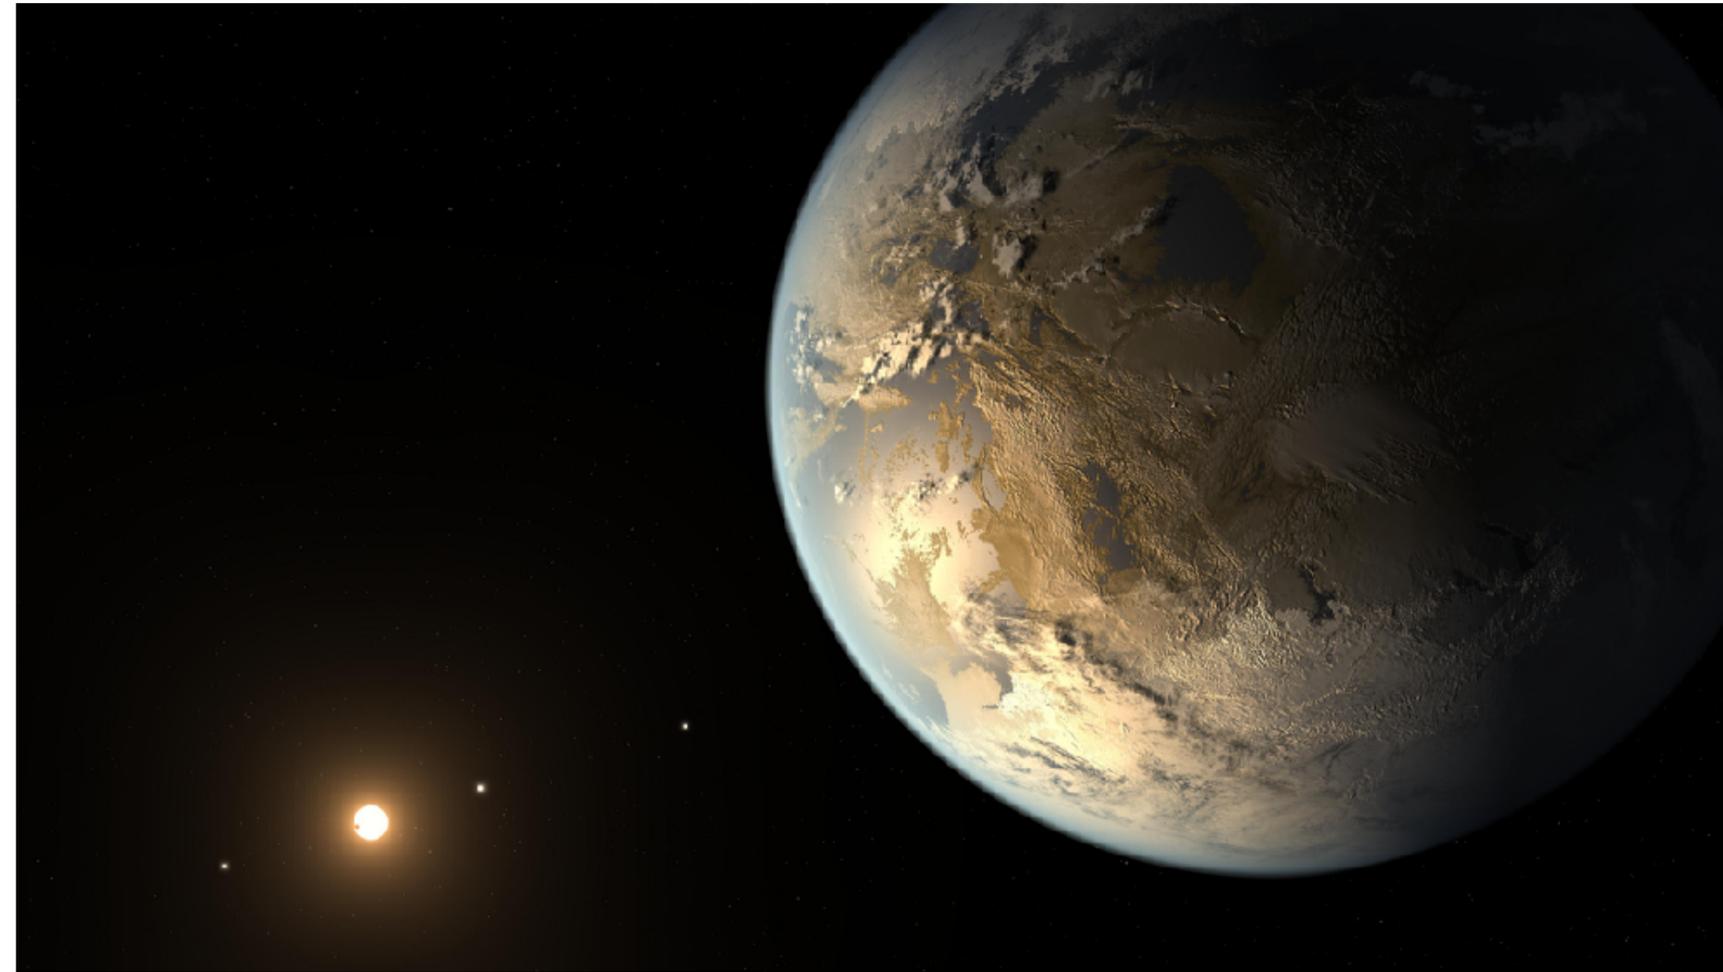

# Be yourself

- Don't try to become somebody other than yourself.
  - You don't want to live your life your parents or advisor want.
  - Be true to your passion, namely what you love to do.
- At the same time, respect others
  - DEI is really about mutual respect, not about numbers
  - Don't talk over other people.
  - Say hello to each other.
- We are not crazy enough!

# Slides and Posters

- Check with your advisor first if it is OK to make your **slides** or **poster** public
- If OK, upload them to OneDrive.

- We'll post them on the web site  
<https://indico.ipmu.jp/event/420/overview>
  - Be proud to have your research available to the whole planet
  - Maybe some aliens are watching, too!

*Enjoy your graduate study!*
